SoEngage

SoEngage

The objective of the SoEngage project is to develop training to support farmers engage in Social Farming for economic benefit and sustainability of the farm and the rural community.

Social Farming, also known as Care Farming or Farming for Health offers farmers the opportunity to use their agricultural expertise and resources to provide health (mental and physical), social or educational care support services. The farm remains a working farm where people who need care support benefit from participating in farm activities in a non-clinical environment.
